NADEEM AHMAD

Full Stack Developer | Salesforce and Java

Delhi, India 110025 | +91 8541020044 | nadeem25official@gmail.com

linkedin.com/in/nadeem-ahmad25 | github.com/nadeem-25

SUMMARY

Full stack developer working across Salesforce and Java. Built a multi-clinic healthcare CRM on Health Cloud end to end (98 Apex classes, 51 Lightning Web Components, three live Experience Cloud sites, 642 Apex test methods), an Agentforce assistant that lets sales reps work in Salesforce from Slack, and integrations between Salesforce, Slack, HubSpot, TallyPrime and Meta. Backend foundation in Spring Boot, Hibernate and MySQL, and day-to-day work in Next.js, TypeScript and Supabase.

TECHNICAL SKILLS

- **Salesforce development:** Apex (Triggers, Batch, Queueable, Schedulable, REST callouts), SOQL, SOSL, Lightning Web Components, Aura, Visualforce (PDF), Platform Events, Inbound Email Services, Custom Metadata, Apex tests with mocked callouts
- **Salesforce platform:** Health Cloud, Service Cloud, Sales Cloud, Revenue Cloud, Experience Cloud (LWR), Flows, Entitlements and Milestones, Assignment and Escalation Rules, Duplicate Rules, Reports and Dashboards
- **AI and agents:** Agentforce (Employee Agents, Agent Script, Apex actions), Salesforce for Slack, OpenAI API through Named Credentials
- **Security and integration:** REST APIs, webhooks, Named Credentials, Protected Custom Settings, Profiles, Permission Sets, Sharing Rules, Apex User Mode, Guest User Security
- **Java and backend:** Java 8+, Spring Boot, Spring Security (JWT), Hibernate, JPA, MySQL, database design (3NF), indexing
- **Web and tools:** JavaScript, TypeScript, Next.js, Supabase, HTML5, CSS3, Zoho CRM (Deluge, COQL), Salesforce CLI, Git, Postman, Maven

EXPERIENCE

Full Stack Developer (Salesforce) 2026 – Present

Cloud Ingenious *India*

- Build Salesforce solutions for clients on Health Cloud, Sales Cloud, Revenue Cloud and Agentforce; the largest builds are listed under Projects.
- Rebuilt the company's field sales app, a Salesforce managed package, on Zoho CRM: 44 custom modules, 467 fields, 25 Deluge functions and 9 workflow rules, all deployed through Zoho's APIs with scripts instead of clicks.
- Built a fabric configurator for a manufacturing use case: an LWC on the Opportunity page with a seven-tab configuration window, a catalog read live from the price book, stock checks, and configured lines saved as Opportunity Products.
- Working on Catalyst, the company's own business platform (Next.js, PostgreSQL, Docker), with sales, marketing, order-to-cash, inventory, service and manufacturing modules and a super admin console behind two-factor sign-in.

Web Development Intern Dec 2022 – Feb 2023

JMI Model United Nations *New Delhi*

- Built responsive pages in HTML, CSS and JavaScript, with lazy loading and DOM work that kept the site fast for 500+ concurrent users.
- Added form validation and dynamic UI components that cut user input errors.

PROJECTS

HealthFirst Clinics: healthcare CRM on Salesforce Health Cloud Sep 2026 – Present

Apex, LWC, Health Cloud, Experience Cloud, Service Cloud, Flows, Platform Events, OpenAI API

Live: Public website | Patient Portal | Doctor Portal

- Built a multi-clinic healthcare CRM end to end: 98 Apex classes (33,000+ lines), 17 triggers, 51 LWCs, 9 custom objects and 6 custom metadata types, covered by 642 Apex test methods.
- Launched three Experience Cloud sites: a public website with an inquiry form, a Patient Portal (appointments, bills, records, care plans) and a Doctor Portal (diary, patients, admissions).
- Automated inquiry handling on Cases with assignment and escalation rules, entitlement SLAs with milestones, and work queues for coordinators.

- Built AI triage that scores urgency and specialty through a Named Credential callout to OpenAI, falling back to rule-based scoring on any timeout, rate limit or bad response.
- Built an in-app AI agent whose every read and write runs in Apex User Mode, so it can never exceed the operator's sharing, object and field permissions.
- Implemented booking and auto-booking on Service Appointments, bed admissions and discharge, billing with invoice lines, and Visualforce PDF invoices and prescriptions.
- Secured guest and portal flows with SHA-256 hashed one-time codes, per-user and daily rate limits and enumeration-safe responses; added consent tracking, data-erasure requests, retention batch jobs and a FHIR R4 health-record export.

Sales Assistant and Integration Hub: Sales Cloud, Agentforce and Slack Oct 2026

Apex, LWC, Agentforce, Agent Script, Custom Metadata, Slack API, HubSpot API, Meta Marketing API, TallyPrime

- Built an Agentforce employee agent that lets reps search, read, create and update Salesforce records and review their pipeline from Slack, through five Apex actions that confirm before any write.
- Built a sync engine that connects Salesforce with Slack, HubSpot, TallyPrime, Meta Ads and Meta Lead Ads, with direction, schedule and conflict rule set per connection. Field and object mappings live in Custom Metadata, so adding a mapping needs no code.
- Posted Opportunity changes to a Slack channel with before and after values and a record link, and set up Slack channels on record pages and Sales Cloud for Slack.
- Kept every credential server-side in a protected custom setting, never sent to the browser, and tested the hub with Apex tests against mocked APIs.

Scallor: delivery intelligence platform scallor.com

Next.js, TypeScript, Supabase

- Scallor helps consulting teams catch unpriced scope changes by reading SOWs, meetings, Slack, email and tickets.
- Work on the platform's API routes, server actions, scheduled jobs and webhook receivers, with a focus on keeping them reliable in production.

Salesforce Revenue Cloud: B2B manufacturing proof of concept

Revenue Cloud, Sales Cloud, Lightning Experience, LWC, Apex, Flows

- Configured Lead to Order for a B2B manufacturer: Lead, Account and Contact, Opportunity, Quote, Order, through to order activation.
- Set up the Revenue Cloud product catalog for product selection and quoting; enforced business rules with Validation Rules and Flows; built LWCs, and Reports and Dashboards for sales metrics.

Quickmart: e-commerce backend

Spring Boot, Spring Security, JWT, Hibernate, MySQL, Swagger

- Layered backend (Controller, Service, Repository) with product, cart, order and payment simulation modules, secured with JWT and role-based access (Admin, User).
- Pagination, filtering and stock validation that prevents overselling; global exception handling; APIs documented with Swagger; JPA queries tuned with indexing.

TRAINING

Full Stack Java Developer Course Jul 2025 – Present

QSpiders *India*

Core and Advanced Java, JDBC, Servlet, JSP, Spring Boot and front-end technologies.

EDUCATION

Bachelor of Computer Applications (Honours) 2021 – 2024

Magadh University *CGPA 73.3%*

Bachelor of Arts (Honours), Sociology 2018 – 2021

Patliputra University

LANGUAGES

English, Hindi, Urdu
